Hardware Installation for USB 2.0 PCI Card

1. Turn off the power to your computer and any other connected peripheral devices. Follow the precautions for static electricity discharge.
2. Unplug the power cord from the back of the computer
3. Remove the computer's cover.
4. Select an available 32-bit PCI slot for the new board.
5. Remove the selected slot bracket by unscrewing the holding screw and slide it out. Save this screw for securing the USB 2.0 PCI card after it's installed.
6. To install the USB 2.0 PCI card, carefully align the board's bus connector with the selected expansion slot on the motherboard. Push the board down firmly, but gently, until it is well seated.
7. Replace the slot bracket's holding screw to secure the board to the rear slot panel.
8. Select an empty 3.5" or 5.25" expansion slot
9. Put the 3.5" expansion case in the expansion slot
10. Screw the case on the side, two screws each side
11. Connect the cable from the 3.5" case to USB 2.0 PCI card
12. Put back the computer's cover.
13. Reconnect the power cord and make new connections to the ports.

Step 8~11 only applicable for
USB2.0 PCI card with **optional**
3.5" or 5.25" expansion case
